

```

// Package main demonstrates creating PowerPoint presentations with various chart
types.
//
// This example shows how to create six different chart types using the goffice
library:
// 1. Bar Chart (Clustered) - Quarterly sales comparison
// 2. Line Chart - Temperature trends over months
// 3. Pie Chart - Market share distribution
// 4. Area Chart - Cumulative revenue growth
// 5. Scatter Chart - Correlation analysis
// 6. Doughnut Chart - Budget allocation
//
// Each chart is placed on a separate slide with realistic fake data.
